

# Summit Project Plan

---

<b>Project Title</b>	Building Capacity within our RtI Leadership Team and Universal Team
<b>District/ Organization</b>	Sheboygan Area School District - Urban Middle School

---

## Project Description

The goal of the project is to build capacity around RtI. The proposed project uses professional development through the Wisconsin RtI Center Modules and Framework Training, CESA 7 Coaching Network and Training, and Leadership Team led professional development at staff meetings.

The district is changing the professional culture to support a growth mindset in all content areas by fostering teacher leaders to support the RtI process. Increase collaboration time will lead to creating systemic and systematic processes centered around the existing action plan. The group will foster effective questioning, coaching, and analyzing data to develop sound processes. Proactive measures will help in elevating the school culture towards increased family/student engagement and the belief that all students will show growth.

The role of all teachers is crucial in reform by recognizing the potential to refine the RtI process to reflect increased collaboration, communication, family and student engagement, and growth for all students. Teachers need to lead from within their classrooms, demand effective implementation, and gain ownership of the process.
